MPA
MAINZ PHYSICS ACADEMY

Referee Form for Recommendation

Applicant's Name: Reza Aliasgari Renani

This student is applying for admission to the PRISMA++ Fellowship program. Applicants are asked to forward this form to two referees who can provide an insightful assessment about the candidate's abilities to thrive in the program. The selection system is highly competitive and we kindly ask you to give your frank opinion about the academic and personal qualities of the candidate.
The Referee Form for Recommendation should be submitted from an institutional email account to mpa@uni-mainz.de before **February 28th, 2026.**

1. How long have you known the applicant? 4 Years
2. In what capacity have you known the applicant (supervisor, teacher)?

   I am his scientific supervisor during his master degree studies.
3. Please rate the candidate's overall academic performance and promise relative to a representative group of students with a comparable level of education:

Top 5% Exceptional	Top 10% Outstanding	Top 15% Very Good	Top 50% Good	Below Top 50%
✓				

4. Please rate the candidate according to the following criteria using the given scale:

	Top 5%	Top 10%	Top 15%	Top 50%	Below Top 50%	Unable to Judge
Theoretical Knowledge			✓			
Intellectual Potential		✓				
Experimental Ability	✓					
Creativity			✓			
Ability to work in a team	✓					
Ability to work independently	✓					
Motivation		✓				
English Language Skills	✓					

Overall impression *(Please provide a one page summary of your overall impression of the candidate and their qualifications for the PhD program. You may include any relevant information not covered in the above sections.)*

I am writing to recommend my student and advisee, Reza Aliasgari Renani, for the PRISMA++ PhD Fellowship in Physics (MPA) at Johannes Gutenberg University Mainz. I am a senior researcher in the Laboratory of Plasma Systems at Moscow Institute of Physics and Technology, and I supervised his master's research on radiation and plasma effects in FPGA systems. I worked with him directly in the laboratory and can evaluate his technical ability, research discipline, and readiness for doctoral work.

Reza planned and executed irradiation experiments on FPGA boards in a plasma chamber with electron beam exposures of different energies from 25 to 60 keV, under controlled oxygen pressure and temperature cycling. He prepared protocols, defined exposure parameters, set up monitoring of the FPGA output during and after irradiation, and maintained reliable logs for analysis. He coordinated with colleagues responsible for the FPGA designs to ensure the experiments were technically meaningful. He took responsibility for the full experimental chain and regularly proposed additional measurements, improved instrumentation layouts, and clearer documentation. He did not wait for tasks to be assigned and consistently asked for more work once his core tasks were complete.

His engineering skills are strong and practical. He understands FPGA design flow and verification, and he can translate experimental requirements into testable system behavior. He is comfortable working across hardware and software, from cabling to data capture and post-run analysis.

He also works well in a multidisciplinary environment, connecting device-level effects with system-level outcomes. This ability to work with microelectronics and physics experimental setups makes him an ideal PhD candidate.

This background fits the PRISMA++/MPA fellowship focus, where reliable electronics, data acquisition, and real-time processing must operate under demanding experimental conditions. Reza has already worked at the intersection of microelectronics, experimental constraints, and system validation, and I expect him to contribute to Mu3e Phase II readout and data transmission electronics and fast online event reconstruction. His initiative and sense of responsibility make him effective in collaborative research settings. Therefore, I am pleased to provide my highest recommendation for Reza for the PRISMA++ PhD Fellowship and am confident that he will make meaningful contributions to its research.

Name of Referee: Mikhail Vasiliev

Position of Referee: Head of the Laboratory of Plasma Systems Institution: Moscow Institute of Physics and Technology
